Still More to come this March on Rickey's World

There is more to come this march, and it is something everyone might be waiting for. Dave (David) has submitted a tutorial to interface MMC card with 8052 based controller with on-chip SPI and porting Chan's FAT FS Library. Tutorial is targeted on a specific development board but he is working on making it more generalized.

So soon you will all be able to use your 8052 controllers with FAT File system with whole lot of storage.

Stay tuned.. there is still more to come! as surprise
